

General Info

File name:	wireframe.exe
Full analysis:	https://app.any.run/tasks/ca2feff2-8ef3-4c15-90f3-7826646b5637
Verdict:	Malicious activity
Threats:	AsyncRAT
AsyncRAT is a RAT that can monitor and remotely control infected systems. This malware was introduced on Github as a legitimate open-source remote administration software, but hackers use it for its many powerful malicious functions.	
Remote Access Trojan	
Remote access trojans (RATs) are a type of malware that enables attackers to establish complete to partial control over infected computers. Such malicious programs often have a modular design, offering a wide range of functionalities for conducting illicit activities on compromised systems. Some of the most common features of RATs include access to the users' data, webcam, and keystrokes. This malware is often distributed through phishing emails and links.

Processes

Total processes	Monitored processes	Malicious processes	Suspicious processes
46	4	3	0

Behavior graph

Specs description			
Program did not start	Low-level access to the HDD	Process was added to the startup	Debug information is available
Probably Tor was used	Behavior similar to spam	Task has injected processes	Executable file was dropped
Known threat	RAM overrun	Network attacks were detected	Integrity level elevation
Connects to the network	CPU overrun	Process starts the services	System was rebooted
Task contains several apps running	Application downloaded the executable file	Actions similar to stealing personal data	Task has apps ended with an error
File is detected by antivirus software	Inspected object has suspicious PE structure	Behavior similar to exploiting the vulnerability	Task contains an error or was rebooted
The process has the malware config
